For immediate release:

DAE Systems refurbishes its Santa Ana Headquarters.

Santa Ana, CA – DAE Systems announced today it had just completed an extensive refurbishment and modernization project on its Administrative, Customer Service and Engineering departments. The project, spanning nearly six months, is expected to improve customer service by improving employee morale, efficiency and organization. Design teams are now collocated for better communication and faster development. The refurbishment project also improves the layout of the head office to allow for easier communication within and between departments as well as improving the aesthetics of the area.

DAE Systems contracted with Kraus Construction and John Arnold Garcia Design to oversee the construction, installation and design of the new space. Throughout the office, Haworth Corporation’s “Race” system is used for the office workstations while their glass offices were used for the managerial spaces. By using one company for both spaces, a cohesive design feel was achieved while also allowing for the most efficient use of space. The network backbone was also upgraded in conjunction with the workspace updates to ensure the Company is ready for emerging data transport requirements for the foreseeable future.

DAE Systems would encourage our customers to come in and share their current project needs. Your Product Manager will be very happy to take you on a tour of the new space while you’re here.
