PR 22: DAE Establishes European Entity and Engineering Office

DAE is proud to announce the formation of its new European based entity Dynamic Air Engineering UK Ltd based in Belfast, United Kingdom. The formation also coincides with the implementation of an Engineering team to support current and new potential customers. This entity is responsible for the development of the European territory with respect to the core airtechnology and electro-mechanical control brands, namely Dynamic Air and MilMotion. This major investment is in response to many customer requests to support existing and new programs locally. DAE engaged with the local regional development agency Invest Northern Ireland (Invest NI) for this venture and will continue to work with Invest NI in going forward and developing the entity further.

The new entity and has recently embarked on a number of new brushless DC Fan developments, which will be available later in 2011.
